

DELTA COVER - COMPANY PROFILE

GRP COVERS

Past and present

The union of two companies with thirty years experience in the fibreglass and wastewater sectors, merging their respective know-how, led to the creation Delta Cover s.r.l. in February 2002. Its immediate target was the water treatment sector; in particular in the producing special fibreglass items.

Year after year, our company has managed to make a name for itself in the production and installation of GRP covers for civil and industrial purification plants. Our name has become a guarantee for quality and reliability, a point of reference in Italy.

Ongoing research carried out by Delta Cover in the structural and technological field enables it to respond concretely to the increasingly urgent problem of the co-existence of purification plants with the surrounding habitat, respecting the environment.

“Please take care of nature, others and the environment”

Pope Francis

Design

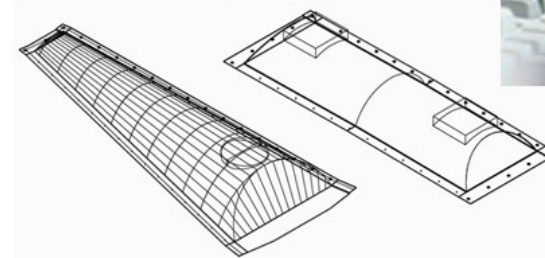

The constant intention to evolve and improve, through professional and valid collaborators, means we can deal with needs to the best expressed by an evolving sector.

The most precious added value we can offer who try our company is our experience and know-how.

Experience and know-how acquired year after year, mean we can offer and advise clients with that little bit extra .

Delta Cover's well-trained, capable personnel is at your full disposal for contact and meetings needed to understand the problem and provide the best solution.

The high product quality level, a wide model range and 30 years experience has enabled us to operate successfully in contact with the market's most important water treatment firms and satisfy a growing, increasingly demanding clientele.

Our company offers solutions for any type of cover for industrial plants.

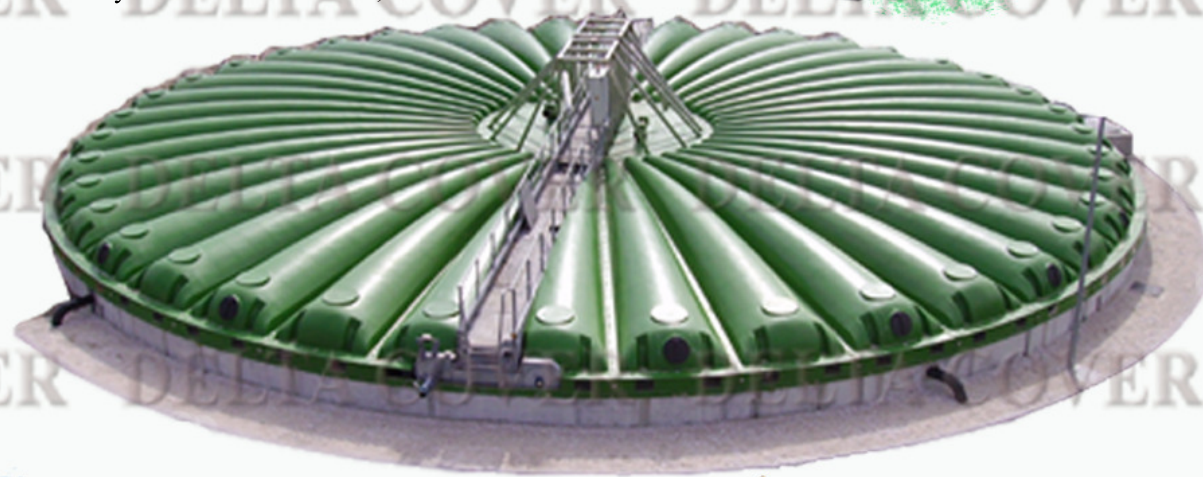

Self-supporting roofings suited to support snow and loads established by laws in force. The wide range of moulds available mean we can guarantee a ready, fast response to the customer.

GRP covers compared to other materials have the following advantages: lightweightness, elasticity, resistance to strain, resistance to atmospheric agents, very long-lasting, no maintenance needed, easy to remove when any intervention is needed, simple to assemble, can be walked on and are designed for the specific plant.

More specifically, we can design and make any type of cover such as:

covers for rectangular basins, domes for circular basins, covers for cochleas, covers for circular basins with fixed or rotating bridge, covers for desander, covers with large span, . Delta Cover also make air deodorisation plants, ideal addition for treating smelling emissions in purification plants.

Our work

PRODUCTION

Located in the centre of the Po Plain, Delta Cover have got three production sites for a total of 8.000 m², more than 50 moulds always available and competent, well-trained staff. A continuously evolving company that has grown together with market changes .

LOGISTICS

Our products reach directly client's yards, suitably packed and loaded on the truck of international shipment companies.

INSTALLATION

Our coverages are design by trained staff and they can be able easy, quickly installed by anyone.

More than 80.000 m² of coverages realized
